---

## SUMMARY

Fullstack developer who builds AI directly into products rather than bolting it on after. Freelance work so far includes production websites, an n8n-based WhatsApp automation for filtering important messages, a workflow tool with live database sync, and a productivity app with an in-app AI assistant wired through the OpenRouter API — built with Vanilla JavaScript, React, and Next.js on the frontend, and Node.js, Python, and PHP further back. Also spent 2 years as an independent freelance graphic designer and 4 years as a calligrapher completing 500+ commissions, work that runs on the same deadline discipline and client feedback loops as software development.

---

## EXPERIENCE

### Independent

*Freelance Software Developer*

Remote

*June 2026 – Present*

- Built an AI-powered WhatsApp automation using n8n and the WAHA (WhatsApp HTTP API) to automatically filter important incoming messages — webhook-triggered flow that detects image attachments, downloads and converts them to Base64, and routes text through the OpenRouter API and images through the Opencode.zen API (Ox Alpha model) for AI analysis before conditional filtering.
- Built Personal Habit Tracker (Aug 2026), a productivity app with an in-app AI assistant powered by the OpenRouter API — reads and tracks user habit data directly so users can ask questions instead of digging through FAQs.
- Built PusakaApp (Jul 2026), a full-stack school reunion attendance system: Excel import, payment-proof photo upload to Vercel Blob, and one-click export to Excel, PDF, and JSON. Delivered free as a community project.
- Built FlowGram (May 2026), a workflow builder with drag-and-drop infinite canvas and multi-project dashboard, wired to Google OAuth and a Neon PostgreSQL database for cloud sync.

### Independent

*Freelance Frontend Developer*

Remote

*March 2025 – June 2026*

- Built and shipped a client website for a school counselor — services section, blog layout, testimonials, and a working contact form — in plain HTML, CSS, and vanilla JavaScript.
- Built two self-initiated landing pages (Mekatron, a 3D robot showcase; a scroll-driven creative portfolio) using React and Next.js to practice animation and scroll-based interaction.
- Live projects and source code: [github.com/alfzilham](https://github.com/alfzilham)

### Imam Travel

*Freelance Graphic Designer*

Aceh, Indonesia

*June 2025 – March 2026*

- Designed posters and promotional materials for Umrah and international tour packages using Adobe Photoshop and CorelDRAW.
- Completed 20+ paid design projects across a range of client promotional needs.

### Independent

*Freelance Calligrapher*

Aceh, Indonesia

*2023 – Present*

- Completed 500+ paid custom calligraphy commissions based on individual client requests.
- Specializes in Naskh script and Mushaf illumination decoration.
- Won 10+ calligraphy competitions at local/school, sub-district, district, and provincial levels.

---

## LEADERSHIP & ACTIVITIES

**OSMID — Student Organization of Dayah Jeumala Amal**

*Member, Events & Design Division*

Pidie Jaya, Aceh, Indonesia

*2025 – 2026*

- Planned and ran school-wide events as part of the events and design division.
- Designed posters and digital banners for organizational events.
- Designed and installed hand-lettered Arabic vocabulary boards (mufradat) on plywood across the dayah campus.
- Reinstalled Windows and resolved hardware issues on the organization secretary's computer.
